

## Full-Stack Developer (JavaScript)

- Sydney, Australia
- Bali, Indonesia

Industry - Computer Software

Employment type - Full-time

Experience - Mid-Senior level

Job Function - Software Development

### Job Description

Be a part of an energetic and fast moving team that delivers incredible, innovative improvements to our Secure Code Warrior platform. Using Node.js and Angular, we create a rich, interactive and engaging user experience. You will be part of the core development team that makes this gamified platform a success and have close contact with our management to agree on future improvements, client requirements and deliver quality code accordingly.

### About You

You are a passionate software engineer with some years (3-8) of professional experience and are a problem solver. You should be fascinated by coding efficiently using Mongo, Koa.js, Node.js and Angular.js, but also have the diversity for the occasional deep dive into C#, Java, Objective-C, Ruby or Python.

If you know something about SQL injection, cross-site scripting, remote code execution and the OWASP Top 10 that just makes us like you even more as we do not have to explain what we do.

You should be keen to work in a dynamic and young start-up environment to help us build new features in the front-end or back-end of our platform using agile development. We do not have any official working hours and we do give you a lot of freedom, but we require that you take up accountability, be a team player and deliver with quality and security in mind.

## About Us

We are a software tech startup located in Sydney CBD that wants to improve developer security knowledge around the world. We serve some of the big financial institutes in Australia, Europe and the US.

Our backgrounds are pretty diverse with an Iranian, an Argentinian hopping around the world, three Aussies with different ethnic backgrounds, an Irishman having spent most of his time in US/UK and a chocolate-eating Belgian guy. What do we have in common? We want to make the cyber world a safer place by improving security at the source.

Secure Code Warrior is an innovative platform that will change how companies identify, use and train security talent in their development communities. It allows an organisation to measure, benchmark and improve secure coding skills of both in-house and outsourced developers. It uses game-based coding challenges to assess the developers in their preferred coding language, provides positive reinforcement to keep them engaged, and creates healthy competition between developers and teams to foster a security culture.

PS: We also love geeky stuff like playing with the latest tech, watching FPV drone racing, chocolate, video games, foosball and pizza.
